

TSB: Using Shielded RCA Video Cable with Stud Mount Cameras (GT-T6003, GT-T6003V, or GT-6402C)

GT-T6003/GT-T6003V/GT-6402C camera pigtail wire passes through the mounting stud, terminating in a quad 3.5mm jack. Standard cables in these kits splits from a 3.5mm socket to power and unshielded RCA-M video connection. If you choose to upgrade to shielded RCA video cable, the standard video cable must be cut down and an inline RCA socket must be soldered to the wire. This will leave a pigtail RCA-F connection ready to connect the RCA M-M shielded video cable.
