

# TSB: Trimming Carbon Fiber Grid Heater for Vertical Seat Listings

Some vehicle seats have a full length front to rear feature line in the seat bottom. There is generally a continuous vertical listing strap attached to the seat skin which passes through the seat foam. All universal fit seat heaters require some modification accommodate seat listings. Full length vertical listings require modification of both the heater pad and listing strap as follows:

1. Cut listing strap to make it multiple tabs instead of one continuous tab
2. Cut slots in heater pad so that tabs can pass through
3. Install seat heater pad
4. Install seat skin and pass tabs through holes in heater pad

**ALTERNATE SOLUTION:**  
**Use Split Pad Seat Heaters**
